Research Professor (ret.) CUA Physics Dept.  

Electromagnetism: Nature’s Force that Shapes Our Lives  

Of the four forces of nature, it is the electromagnetic force that activates all of the natural phenomena around us as well as our bodies and brains. It has been harnessed throughout our evolution and is indispensable in modern technology. My lecture is not a tutorial on electromagnetism, but is intended to convey the wonder of how this one force can do so much to enable our lives, and how electromagnetic phenomena so deeply imbeds and intimately links us to earthly nature.

Wednesday September 12, 2012  
4:00pm  
106 Hannan Hall  
Refreshments will be served at 3:45  

Sponsored in part by the Graduate Student Association
